

# Resource Guide

The Harvard Sussex Program on Chemical and Biological Weapons (HSP) and CBW Events have developed this comprehensive CWC Resource Guide for the Third CWC Review Conference. Through collecting together as many of the key relevant documents as possible, this Resource Guide is intended to provide a convenient reference source for use during the Review Conference, and beyond. It contains documents relating to the regime to control chemical weapons, including:

- Official documents and other texts;
- Documents from the United Nations;
- Documents from other regional organisations;
- Documents from informal arrangements;

It is also intended to serve as a useful resource for researchers, non-governmental organizations, journalists and others in civil society with an interest in the regime to control chemical weapons in general and the CWC in particular. This Resource Guide is available from [www.cwc2013.info](http://www.cwc2013.info). Whilst the documents in the hard copy version of this Resource Guide are in English, the electronic version also contains, where readily available, the documents in their official translations into the five other UN languages.

The Resource Guide has been prepared by Caitríona McLeish and James Revill of the Harvard Sussex Program and Richard Guthrie of CBW Events. Financial support has been provided by the United Kingdom Foreign and Commonwealth Office.

## **The Harvard Sussex Program on Chemical and Biological Weapons (HSP)**

HSP is an inter-university collaboration for research, communication and training in support of informed public policy towards chemical and biological weapons. The Program links research groups at Harvard University in the United States and the University of Sussex in the United Kingdom. It began formally in 1990, building on two decades of earlier collaboration between its founding co-directors.

## **CBW Events**

CBW Events is a long-term project, inaugurated in 2007 to record significant events, both large and small, relating to preparation for or prevention of chemical and biological warfare. These primary areas of work are supplemented by a number of contemporary activities, notably analysis and reporting on significant events in the development of CBW policy.
